The state is committed towards promotion of education, awareness, research & development, entrepreneurship, technology development and research commercialization etc, and is also endeavouring towards building a consensus through its various programmes and outreach activities across the state.

PREAMBLE

Plants contain many valuable secondary metabolites that are useful as drug sources for pharmaceuticals, natural fungicides and insecticides for agrochemicals, natural food flavorings and coloring agents as pharmaceutical aids, and natural fragrances and oils for cosmetics. Plant biotechnology is now center stage in the fields of integrative medicine that involves the use of natural products for treatment of human diseases with genetic engineered plants that are more productive and effective. In a current era, there is depleting natural resources and increasing demand of natural bio-products of therapeutic and industrial importance. It becomes essential to increase the efficiency of the industrial extraction of these compounds to replace the chemical alternatives. Highly enriched fruits and vegetables with certain improved level phytonutrients possibly substitute the chemically synthesized food supplements and vitamins.

The present conference will be organized with aim to regulate the level of phytonutrients which would be beneficial to improvise individual health, society and herbal drug industry. To achieve aims and objectives of the conference, the eminent experts from diversified field of plant biotechnology will deliver their address to create awareness amongst budding scientists about different aspects of plant biotechnology.
